

superschematic

we draw the schematic, then we build the thing.
a small software workshop · cleveland, ohio

spec sheet

based	cleveland, oh
focus	two spaces, on purpose
products in flight	02
layers of management	00

01 what we build

niche consumer products

Focused products for specific audiences, designed, built and shipped end to end.

b2b internal tooling

Internal tools that replace spreadsheets and manual workflows inside your business.

02 kinds of projects

01 custom integrations

Stripe, Google Cloud, AI models

02 bespoke apis

REST, webhooks, background jobs

03 scalable ecommerce

Shopify, headless storefronts, custom checkout

04 full products

web apps, mobile apps, internal tools

03 in flight

ezigab

under development

AI-powered headless CMS for multi-language content.

waltour

under development

AI travel planner for personalized walking tours.

04 how a project goes: the timeline

weekly working software through the build · 5-business-day review window per milestone

05 simple pricing

One fixed price per project, agreed on the schematic before build work starts. Payment follows the work:

25%	25%	30%	20%
on signing	schematic approved	across build milestones	at handoff
- Each milestone has written acceptance criteria and a 5-business-day review window. - Out-of-scope changes are quoted up front and billed hourly at the shop rate card. - No surprises: price, scope and approach are fixed on one page before building.			

06 the whole crew

Michael Sharp

principal

Monica Hawes

administrative coordinator

elite engineers

hand-picked contractors per build

Same principal on your project from sketch to handoff. Long-term partnerships, zero layers of management.

start a project

first step: a sketch call to see if software is the answer.
